

Pacific Northwest Snowfighters

NATURAL ALTERNATIVE ICE MELT

MAKES PRESTIGIOUS PNS QUALIFIED PRODUCT ROSTER

FOR REDUCED CORROSION

Several years ago transportation agencies formed the Pacific Northwest Snowfighters Association to develop specifications for snow and ice control. The association is comprised of technical experts in the fields of chemistry, environment, maintenance operations and management, insurance law and claims, public affairs and purchasing and has had the privilege to work with the foremost pioneers in deicing technology.

Their mission is to provide specifications for the highest quality products balancing the quality of the environment with providing the safest possible transportation system and maximum mobility for the traveling public during snow and ice conditions, within reasonable budgetary, product performance and environmental constraints.

During a ten month process, the PNS tested Natural Alternative Ice Melt, and in June, 2010, awarded Natural Alternative a place on its prestigious Qualified Product Roster. Their tests concluded that Natural Alternative Ice Melt is 26.4% less corrosive than sodium chloride, and therefore, safer for the environment, including watersheds. See the Qualified Product Roster or view it on the web at <http://www.wsdot.wa.gov/partners/pns/pdf/PNSQPL.pdf>.

Category 8 - Non Corrosion Inhibited Solid Sodium Chloride

CATEGORY 8A-R Standard Gradation, Road Salt, Insoluble Material less than 10%, and Moisture less than 0.5%.

Product Name	Manufacturer	Date Approved
Natural Alternative Ice Melt	NaturalLawn of America	5/17/2010
